

Alex R. Mercer

B.S. COMPUTER SCIENCE SENIOR • ASPIRING DATA ANALYST

 alex.mercer@university.edu  (555) 234-5678  linkedin.com/in/alex-mercerc-data  github.com/amerccer-data

 Austin, TX

Analytical Computer Science senior with a strong background in SQL, Python, and probabilistic data modelling. Experienced in transforming raw complex datasets into interactive dashboards and actionable operational metrics. Seeking a full-time Data Analyst role to leverage statistical computing and visualization skills.

TECHNICAL SKILLS

Languages & Query:	Python (Pandas, NumPy, Scikit-learn, Seaborn), SQL (PostgreSQL, MySQL), R
BI & Visualization:	Power BI, Tableau, Matplotlib, Plotly, Excel (PivotTables, Power Query, VBA)
Data Engineering:	ETL Pipeline Development, Data Cleaning, Wrangling, REST APIs, JSON/CSV Parsing
Tools & Methods:	Git, Jupyter Notebooks, A/B Testing, Descriptive & Inferential Statistics, Regression Analysis

EXPERIENCE

Data Analytics Intern Jun 2025 – Aug 2025
Apex Retail Solutions Austin, TX

- Queried transactional databases using **PostgreSQL** to aggregate and analyze purchase trends across 150K+ monthly active customers.
- Designed and automated a dynamic **Power BI dashboard** tracking weekly churn rates, reducing manual reporting overhead by 12 hours per week.
- Performed exploratory data analysis (EDA) using **Python** to identify key purchase bottlenecks, leading to a 4.2% optimized conversion recommendation.
- Cleaned and structured unstructured supplier inventory datasets containing over 500,000 records using Pandas and regex routines.

Computer Science Peer Tutor – Statistics & Databases Sep 2024 – Present
University Academic Success Center Austin, TX

- Mentored 40+ undergraduate students in Relational Database Concepts, SQL query optimization, and Probability/Statistics coursework.

PROJECTS

E-Commerce Customer Segmentation & Lifetime Value Model Python, Scikit-learn, Tableau

- Implemented RFM (Recency, Frequency, Monetary) analysis on a dataset of 250,000 records using Python to group customers into 5 distinct behavioral segments.
- Trained a K-Means clustering algorithm to predict customer churn with 84% accuracy; visualised operational recommendations in an interactive Tableau Storyboard.

Urban Mobility & Traffic Flow Pipeline SQL, Python, Streamlit

- Built an end-to-end data pipeline fetching municipal open-data APIs, storing time-series traffic updates in a normalized MySQL schema.
- Deployed a real-time Streamlit analytical web application visualizing city traffic bottlenecks and average commute delays.
